Dear Members:

This individual incurred an injury involving the right hind foot secondary to kicking the stall (Palm Meadows Training Centre, Florida) on 24 February 2009. The injury involved fractures of the lateral aspect of the navicular bone and the caudal articular aspect of P3. In respect of the syndicate members and for due diligence, a second opinion was obtained from Dr. L. Bramlage, Rood & Riddle Hospital, Kentucky. He concurs with my findings and plan of treatment involving placement of a bar shoe/sole composite and stall rest with radiograph evaluation at 30 day intervals. We feel the prognosis for future racing soundness is fair to good. An updated progress report will follow in a timely manner.

Please contact me if additional information is required.

Regards

Daniel W. Duncan, B.Sc., DVM
Director of Veterinary Services
